

6 BURNER STOVE WITH OVEN

Includes: 2 Shelves

INSTRUCTIONS

OVEN LIGHTING:

STEP 1

Check that all knobs on the stove are in the **OFF** position (red line pointing directly upward).

STEP 2

Connect hose to propane tank. Once secured, turn valve on the propane tank to the **ON** position.

STEP 3

Open oven door and remove the head shield located at the bottom of the oven to expose the pilot light and burner.

STEP 4

Open bottom panel below oven door by lifting up on the panel. Once panel is open, locate the pilot knob. Turn the knob to the **L PILOT** position and depress the button.

STEP 5

Light pilot while continuing to depress the button. Continue for 30 seconds then release the button. The pilot should remain lit.

STEP 6

Turn pilot knob to the **ON** position.

STEP 7

Close the bottom panel and reinsert the heat shield. Turn oven dial to desired temperature.

STOVE LIGHTING:

STEP 1

Check that all knobs on the stove are in the **OFF** position (red line pointing directly upward).

STEP 2

Connect hose to propane tank. Once secured, turn valve on the propane tank to the **ON** position.

STEP 3

Stove knobs correspond as follows: There are 3 sets of 2 knobs (right, middle, and left). Each set is placed in front of their corresponding burners. The knob to the right of each set lights the **FRONT** burner.

STEP 4

With lighter in hand, turn stove knob to 10 o'clock position and ignite the burner with the lighter.

STEP 5

Turn knob to desired flame height.
